

“APPLY-A-PRINT” MARKING SYSTEM

The image is placed accurately on the paper carrier to your specified edges. This creates a guide for precision alignment.

1 You receive your Apply-a-Print.

2 Remove adhesive liner. Your image will remain on the paper carrier

3 Align edges of Apply-a-Print to clean, dry surface. Once positioned, apply pressure with a squeegee, rubber roller, or finger.

4 Remove paper carrier.

If bubbles occur, simply prick with a needle and smooth-out.

“Apply-a-Print” has been developed by Nameplates For Industry, Inc., as an alternative to silk screening, hot stamping or pad printing directly onto a product. Apply-a-Print Marking System enables appealing product markings to be easily applied, without any training or equipment.

Images with an unlimited scope of colors and shapes are provided on a removable carrier with application guides for easy alignment to the final product. Remarkably, the applied image appears to be part of the surface that it has been applied to.

This is achieved with the minimal .002” thickness of Apply-a-Print and an engineered surface coating that enhances the durability. This coating can be matte, glossy or textured to create the appearance of having been printed directly onto the product the image has been applied to.

Design parameters can be expanded when Apply-a-Print Markings are utilized. Other advantages include reduced product handling, the ease of accomplishing graphic changes and the ability to mask preexisting images or text.

Quotation / Sample Request Form

NFi's Apply-a-Print Markings can enhance the appearance of your product.
We invite you to use this form to enable us to assist you.

Company Name : _____

Address : _____ Your name : _____

_____ Phone : _____ Fax : _____
