

Computer CPU logo are designed to a .98" square to fit a 1" recess. You should measure any recessed areas and indicate the exact size of the recess to ensure that your part will fit.

## Some helpful things to keep in mind when creating artwork

- Keep your artwork .06" in from the edge to accommodate cutting tolerances
- If you include a bleed, be sure to bleed the background at least .125" on all sides
- Use CMYK process colors whenever possible. If you want a customized color for a screen printed part, a color match can be provided for an additional cost.
- If the color is critical and you are printing a full-color CMYK graphic we recommend that you request a color press-proof. Our processes are unique to our industry and colors may not print as expected if you base your expectations on previously printed paper products.
- A dimensional drawing such as an AutoCAD file is absolutely required when holes, cutouts, or clear window areas are required. We can dimensionalize artwork based on your supplied chassis for an additional cost.
- If you have any questions while you're creating or preparing your artwork, don't hesitate to call our Art Director, Steve Moniz at 800 999-8900 ext. 21, or email him directly at [smoniz@NameplatesForIndustry.com](mailto:smoniz@NameplatesForIndustry.com).
- Additional art submission information is available on our website, [www.NameplatesForIndustry.com](http://www.NameplatesForIndustry.com).
